

Map Search

Pop-Up FAQ

If you're unable to view the new tm mapping screens, it may be that your browser is configured to block all pop-up windows. While this is a great way to prevent unwanted pop-ups while browsing the web, it can interfere with legitimate pop-up functions in applications like tmconvey.

Below, you'll find information about pop-ups for some popular browsers. But, because browsers are updated frequently, it may be best to view your browser's help pages for the most up-to-date information on how to enable pop-ups. You may also need to speak to your system administrator as some settings may be managed by them.

Google Chrome

In Google Chrome you can add specific sites to an allowed list so pop-ups for that site always appear. Once you add a site to this list, pop-ups from that site are always visible. For more information on how to manage pop-ups in Google Chrome, take a look at [Google's support documentation](#).

Internet Explorer

In some versions of Internet Explorer the pop up blocker provides an on-screen message notifying you that a pop-up has been blocked and gives you the option to proceed and add it to your approved site settings. [Microsoft's FAQ](#) shows you how to turn Internet Explorer's pop-up blocker on and off. Choose your browser version from the drop-down menu on the upper right.

Mozilla Firefox

Similar to Google Chrome, in Firefox you can add specific websites to an allowed or exceptions list. Mozilla's support pages show you how to [manage pop-up blocker settings in Firefox](#).

Safari

If you've enabled [Safari's pop-up blocker](#), you can still view tm mapping screens as expected. Safari's pop-up blocker doesn't block pop-ups from opening if you've clicked on a button or link on a web page.

If you have any further queries please speak to our helpdesk on 0844 249 9200 or email them at helpdesk@tmgroup.co.uk
